METEOROLOGICAL SERVICE

AGROMETEOROLOGICAL BULLETIN

FEBRUARY 1980

The Weather of February

The changeable weather conditions, which had set in towards the end of January, continued through the first week of February. Spells of heavy rain occurred in all regions from the 1st to the 3rd, and some of the falls on the 2nd and 3rd were of sleet or snow in northwestern and northern regions. From the 4th to the 7th a complex depression affected the country. Rain was widespread and heavy on the 4th in the midlands and western regions and on the 6th in eastern and southern regions.

A southerly airflow set in on the 8th and between then and the 22nd the wind varied mostly between the southeast and southwest, strong and gusty at times. The period was dull and mild. Spells of rain took place on most days in all regions. The wettest day of this period occurred on the 17th in western regions, and on the 18th in eastern regions. Soil temperatures ranged between 7 and 8 °C at most stations by the middle of the month, some 2 to 3 °C above normal. A start to grass growth took place in all regions, this being three to four weeks ahead of the average year especially with respect to northeastern regions.

A ridge of high pressure developed over the country on the 23rd and dominated weather conditions to the end of the month. In contrast to the earlier part of the month this period was mostly dry. Although it was generally cloudy by day widespread sharp frost occurred on most nights. Soil temperatures dropped a little and grass growth was interrupted for a short spell between the 20th and the 25th.

Mean Monthly Amounts of Precipitation were above normal in all regions and well above normal in southern and southeastern regions. Amounts ranged from 10% of normal at Malin Head, and 130% to 160% at many inland stations, to 229% of normal at Rosslare. The wettest day in most regions occurred on the 4th except in eastern and southern regions when the 6th proved to be the wettest day.

Mean Monthly Air Temperatures were above normal everywhere. They ranged from 0.6 °C above normal at Belmullet to 1.9 °C above normal at Casement. Some 4 to 6 days with air frost occurred, mostly confined to regions away from coasts, and widespread severe ground frost took place on a similar number of occasions. Soil temperatures varied from 0.8 °C above normal at Malin Head to 1.9 °C above normal at Casement.

Mean Duration of Bright Sunshine was well below normal in nearly all regions. It ranged from 56% of normal at Kilkenny to 89% of normal at Malin Head. Over most of the country it was less than 70% of normal.

Widespread Strong Winds with gale gusts occurred on the 2nd, 4th/5th, 14th to 17th, and on the 21st.

Summary. February was mild and dull. Rainfall was well above normal, especially in the south and southeast. The last week of the month was mostly dry however.

The data contained in this Bulletin are provisional. Some of the material in Table 1 will be published in its final form later in the Monthly Weather Report; final values of Solar Radiation at stations; marked "e" in Table 2 will be published in the Annual Summary of Solar Radiation.
